Probability Assignment 1

EE22BTECH11026 - KARTHIKEYA HANU PRAKASH KANITHI

Question: Suppose X is a binomial distribution $B\left(6, \frac{1}{2}\right)$. Show that X = 3 is the most likely outcome. (Hint: P(X = 3) is the maximum among all $P(x_i), x_i = 0, 1, 2, 3, 4, 5, 6$)

Solution: Given that, X is a binomial distribution with parameters

$$n = 6$$
 $p = \frac{1}{2}$ (1)

the probability of getting exactly k successes in n trials is given by

$$p_X(k) = {}^{n}C_k p^k (1 - p)^{n-k}$$
 (2)

From equations in (1), The pmf simplifies as,

$$p_X(k) = {}^{n}C_k \left(\frac{1}{2}\right)^k \left(\frac{1}{2}\right)^{n-k}$$
 (3)

$$= {}^{n}C_{k} \left(\frac{1}{2}\right)^{6} \tag{4}$$

We know that ${}^{n}C_{k}$ can be written as,

$${}^{n}C_{k} = \frac{n!}{(n-k)!k!}$$
 (5)

If pmf is the greatest, then ${}^{n}C_{k}$ is the maximum for $k \in [0, n]$, Therefore It can be said that,

$${}^{n}C_{k} \ge {}^{n}C_{k-1}$$
 and (6)

$${}^{n}C_{k} \ge {}^{n}C_{k+1} \tag{7}$$

From (5) and (6), we can state that

$$\frac{n!}{(n-k)!k!} \ge \frac{n!}{(n-k+1)!(k-1)!}$$
 (8)

$$\implies \frac{n!}{(n-k)!k!} \ge \frac{n!}{(n-k)!k!} \frac{k}{n-k+1} \qquad (9)$$

$$\implies 1 \ge \frac{k}{n - k + 1} \tag{10}$$

$$\therefore k \le \frac{n+1}{2} \tag{11}$$

From (5) and (7), we can state that

$$\frac{n!}{(n-k)!k!} \ge \frac{n!}{(n-k-1)!(k+1)!} \tag{12}$$

$$\implies \frac{n!}{(n-k)!k!} \ge \frac{n!}{(n-k)!k!} \frac{n-k}{k+1} \tag{13}$$

$$\implies 1 \ge \frac{n-k}{k+1} \tag{14}$$

$$\therefore k \ge \frac{n-1}{2} \tag{15}$$

From (11) and (15), we can state that

$$\frac{n-1}{2} \le k \le \frac{n+1}{2} \tag{16}$$

We know that, $k \in \mathbb{W}$ and $k \in [0, n]$ and from (16),

$$k = \begin{cases} \frac{n}{2}, & \text{if } n \text{ is even} \\ \frac{n+1}{2} & \text{or } \frac{n-1}{2}, & \text{if } n \text{ is odd} \end{cases}$$
 (17)

As,

$$n = 6 \tag{18}$$

$$\implies k = \frac{n}{2} = 3 \tag{19}$$

Hence proved that,

$$X = 3 \tag{20}$$

is the most likely outcome;

$$p_X(3) = {}^{6}C_3 \left(\frac{1}{2}\right)^{6} \tag{21}$$

$$=\frac{5}{16}\tag{22}$$
